

The AWP Innovation Award

For Innovators in Project Performance in North America, Europe and Globally

The Advanced Work Packaging best practice – established by the Construction Industry Institute (CII, Austin TX) and the Construction Owners Association of Alberta (COAA, Edmonton AB) – is being widely examined and adopted across the global construction industry by major project owners and those within their contractor and supplier ecosystems. AWP has inspired the construction industry across multiple sectors and domains to continue to evolve and innovate in the pursuit of optimal project performance and integrated digital project delivery.

The AWP Innovation Awards have been introduced by Group ASI to recognize the efforts of construction professionals in North America, Europe and worldwide utilizing AWP, employing thought leadership, and channeling lessons-learned into the development of creative solutions for the many challenges facing construction today. Examples of such challenges include – but are not necessarily limited to:

- Workforce shortage, transfer of knowledge, future leadership, and diversity
- Technologies that support and enhance AWP implementation
- Improving safety, quality, and predictability
- Sustainability and environmental stewardship
- Project complexity and scalability of processes and technologies

Note – this award may not be presented every year, but in exceptional circumstances, we may present more than one AWP Innovation Award in a given year (for one of more regions).
